

Hidden clips – a system solution

Hidden clips allow us to install cladding without nails or screws. This means that the surface of the cladding can be kept clean and tidy without making any holes. It also means that the panels chosen can be fully coated before they are installed, which enables higher quality and saves time.

Offering

Hidden clips for installation of coated panels

Normally, a final coat is applied over nails and screw holes, but that is not required with this solution. The panels maintain high-quality because they are coated indoors in optimal conditions.

Hidden clips for installation of Frontwood three-layer boards

Frontwood is a solid wood board with three layers. The boards can be installed with hidden clips to keep the surface nice and tidy.

Advantages

- + Higher quality
- + Time-saving
- + Can be fully painted indoors before installation
