Technical Data Sheet

Liquid Forest® Biomethanol

When we produce pulp for paper and textiles, we also produce biomethanol from wood rawmaterial. Biomethanol is both a renewable fuel for the future and an important platformchemical. Södra's large investments in industrial production are now helping biomethanol become a real alternative to fossil solutions.

Our biomethanol is certified according to ISCC, which means that its manufacturing is environmentally, socially and economically sustainable.

Liquid Forest™Biomethanol can currently be delivered with two different logistic set-ups:

- Delivered by tank truck
- Delivered by ISO tank container

CHARACTERISTICS (given as typical value previous year)

Mehtanol content **≥ 99.9 %** IMPCA001-14	Water content **0.01%** ASTME1064-12	
	Sulfur content **5 mg/ kg** ASTMD3961-98	
Ethanol content **15 mg/ kg** IMPCA001-14	Acetone content **21 mg/ kg** IMPCA001-14
