

Signati
– a stain

Signati is a unique, water-based stain where good penetrating capacity is combined with a weather-resistant, mineral-reinforced surface layer. This reinforcement creates a quick drying coating with improved colour, hardness and durability, and is dirtrepellent.

Offer

We offer an eco-friendly finish for all types of wood that is suitable for both pressure-treated and heat-treated wood. Only two coats are needed for maximum effect. It can also be used on new pressure-treated wood, as well as decking and cladding.

The product is highly flexible and comes in a wide range of colours. Signati is available in the standard colours of grey, black, brown, white, yellow, red, green and transparent. Other colours are available upon request.

Remember that the colour of Signati is not lasting and all colours will turn grey over time. This means that the wood will slowly fade to its natural colour. This can be prevented with regular maintenance.
